

A scatter plot showing the relationship between Field AGB(t/ha) on the x-axis and an unlabeled y-axis. The x-axis ranges from approximately 100 to 600, with major ticks at 200, 400, and 600. The y-axis is unlabeled but has a grid. A blue regression line shows a positive correlation, starting at approximately (100, 15) and ending at (600, 45). A grey shaded area around the line represents the confidence interval. Numerous black data points are scattered around the line, with a notable cluster of points at low x-values (around 150-200) and a few outliers at high x-values (around 550-600).
